

LegalAid AI — Pitch Deck

Company Overview

LegalAid AI is an AI-powered legal assistance platform targeting low-income individuals in tier-2 and tier-3 Indian cities. We use NLP to analyze legal documents, match users with pro-bono lawyers, and predict case outcomes with 78% accuracy.

Problem

Over 400 million Indians cannot afford legal representation. Tier-2 and tier-3 cities have fewer than 2 lawyers per 10,000 people. 67% of cases filed by unrepresented individuals are dismissed on procedural grounds.

Solution

AI document analysis — upload any legal notice, contract, or FIR and receive plain language explanation within 60 seconds. Pro-bono lawyer matching within 24 hours. Case outcome prediction based on 2.3 million historical Indian court cases.

Revenue Model

Freemium SaaS — basic document analysis free, premium tier at Rs 299/month.
B2B licensing to NGOs and legal aid societies at Rs 50,000/year per organization.
Government contracts with district legal services authorities — Rs 5-20 lakh per district.
Target revenue Year 1 — Rs 45 lakhs. Year 3 — Rs 4.2 crores.

Go-To-Market Strategy

Phase 1 — Partner with 10 NGOs in Rajasthan and UP for free pilot deployment.
Phase 2 — District Legal Services Authority partnerships in 50 districts.
Phase 3 — Direct consumer acquisition via legal awareness campaigns on WhatsApp.
Customer acquisition cost target — Rs 180 per user.

Monthly active user target Year 1 — 12,000 users.

Competitive Advantage

Only platform combining document NLP + lawyer matching + outcome prediction.

Trained on Indian legal corpus — not adapted from US/UK models.

Offline mode for low-connectivity areas.

Team

CEO — Legal tech background, 8 years Supreme Court practice.

CTO — NLP specialist, IIT Delhi, previously at legal AI startup in Singapore.

COO — NGO sector, managed legal aid programs across 3 states.

Funding Ask

Rs 1.2 crore seed round.

Use of funds — 60% product development, 25% NGO partnerships, 15% operations.
